

Post Oak Boulevard – North Segment Construction / San Felipe to 610

- Our construction work on the northbound lanes is placing 7x4 foot boxes to help with drainage. We continue our work to Hollyhurst as we move beyond IMT.
- In a week, storm work to bore under southbound 610 frontage will begin, in advance of boxes being brought in. After that, we will continue to place 7X4 foot boxes from Hollyhurst to Post Oak Corner.
- Our work on the 12” waterline continues between West Briar and Camden behind the existing curb on the southbound side.
- In approximately 10 days we will bore a sanitary sewer connection from the north bound side of Post Oak Boulevard to the south bound side, midway between the frontage road and Uptown Park Boulevard.
- Also Centerpoint is doing work north/south on Hollyhurst up to the Uptown Park shopping center on Uptown Park Boulevard. For further information contact Centerpoint.

- We want you to know that we do listen to you and are working hard to minimize construction impact as we build Houston’s signature destination boulevard. To do so we are having to balance noise at night (for residents) and congestion during the day (for workers) while completing the construction as soon as possible. We thank you for your continued understanding.
